

.NET Week 2 Coding Challenge - Programming Assessment.

Date: 19-09-2023

Duration: 4 Hours.

Please read carefully the following problem statement and understand it well before starting your task.

You are tasked with creating a website for a startup that specialises in movie reviews. The company is comprised of a group of movie enthusiasts who want to share their insights and opinions with the world. Your goal is to develop a website with three main pages: a landing page showcasing movie reviews, an "About Us" page providing information about the company, and a "Contact Us" page that allows users to get in touch with the company and provide their information for future updates.

Tasks:

Landing Page (Movie Reviews):

Create a visually appealing landing page that serves as the gateway to the website. Display at least three different movie reviews, each with a movie poster(image), title, brief description, and a link to read the full review. Ensure that the landing page layout is responsive and mobile-friendly using HTML, CSS, and Bootstrap.

About Us Page:

Develop an "About Us" page that introduces the company and its mission. Include a section that describes the team members - Team member name, role, photograph. Utilise appropriate HTML and CSS styling to make the page informative and engaging.

Contact Us Page:

Create a "Contact Us" page with the following elements:
Company name and a brief introduction.
Contact information, including phone number, email address, and physical address.
A contact form that allows users to provide their information. The form should include the following input elements:
Full Name
Email Address
Location (City or Country)
Implement form validation to ensure that:
Full Name is required and contains only letters (no special characters or numbers).
Email Address is required and follows a valid email format.
Location is required.
Add a "Submit" button that, when clicked, should validate the user's input and display appropriate messages for any validation errors.

If the form is successfully validated, display a confirmation message to the user indicating that their information has been submitted.

You are required to use HTML, CSS, and Bootstrap to create the website's structure, design, and responsiveness. Ensure that your website is user-friendly, visually appealing, and fully functional.
